

# Azure Landing Zone Deployment

Ensure Azure environment is set with a solid and scalable foundation

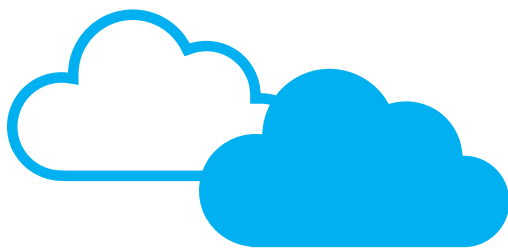

## The Problem

Most organizations start moving to the cloud without a solid plan for how the cloud will be used or a strong foundation that will be used as workloads are deployed. This happens because most cloud deployments start as proof-of-concepts or individuals teams starting projects that quickly turn into critical workloads.

Unfortunately, when starting this way, planning has not been done on how Azure workloads/environments will be centrally managed at scale with necessary security and governance controls. Once workloads get deployed, it is hard to back into a secure and governed landing zone, so it is important to start cloud deployments with a strong foundation.

These landing zones can be difficult to setup without real-world hands-on experience. This can lead to the following:

- Shadow IT
- Lack of Governance & Security
- Discord between business and IT

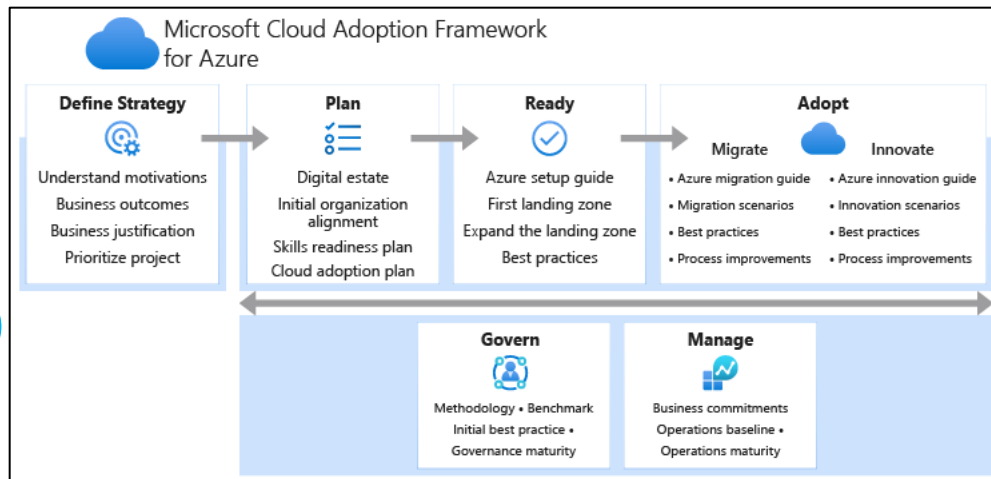

## The Solution

Azure Landing Zones provide a secure and scalable foundation that workloads can be migrated/deployed into and that follow Microsoft's Cloud Adoption Framework. In just 10-12 weeks, Spyglass MTG can accelerate your Landing Zone deployment and navigate common pitfalls in the process.

## The Results

- Solid strategy for cloud adoption plan
- Architectural Design Document that provides a scaffolding for your cloud deployment
- Landing Zone resources deployed with Infrastructure Code allowing for continued management through code

## Spyglass MTG Can Help!

We can help build and implement a secure Azure Landing Zone for your business! [Contact us today!](#)

## About Spyglass MTG-A Women Owned/ Women Led Company

For over 15 years, we've closely partnered with Microsoft to bring their vast and expanding suite of enterprise solutions to our clients. We leverage proven methodologies, migration tools and expert consultants to architect, build, deploy, migrate to, and manage Microsoft solutions. Whether you are deploying or upgrading M365, implementing Azure, deploying Teams, building a SharePoint Site, developing a Security or Governance Model, designing a Modern Warehouse or BI Solution, or developing AI apps on the Power Platform, we can help!
