

## Let Office 365 Do More for Your Business with the Freedom of Developing with PowerApps

For years, the Office 365 suite has provided enterprises with the tools they need to get work done. Whether it's productivity, storage, sharing, or collaboration, Office 365 delivers performance for businesses, and its capabilities are many.

However, at times, companies need to alter what Office 365 apps can do in order to best serve their business needs. Often, this takes the form of extending app functionality, customizing features, or improving integration with Microsoft tools like SharePoint. Fortunately, Microsoft has made this easy.

### Power Up with PowerApps

Microsoft's PowerApps platform is an elegant solution to extend and customize Office 365 apps. The low-code, user-friendly, Microsoft compliant platform makes it easy and fast to extend app functionality, customize integration to legacy systems, or build out custom app capabilities. With PowerApps, you can:

- Build an app on a blank slate or use built-in templates to speed app creation.
- Use any of PowerApps' 100's of connectors to easily connect data to your app—on the cloud or on premises.
- Use more sophisticated developer features to add logic and functionality with Azure Functions.
- Easily publish apps to iOS, Android, the web, or Windows 10.

While PowerApps is a user-friendly tool, an expert Microsoft developer partner can provide help to best add features to apps, and to secure and connect them to your enterprise data.

### Helping a major retailer schedule training events with ease

Spyglass helped a major retailer significantly improve their current setup in SharePoint lists for creating and managing training events

Developing with PowerApps, Spyglass improved SharePoint integration and replaced multiple list URLs with a single interface to schedule events, create sessions, filter, and add registration dates.

We also added missing functionality in event creation such as event date/time, fields for attendee notes, and registration blackout dates. With all of their information on active events in one place, the retailer can make easier decisions about scheduling events, and app users have an easier time registering and providing information related to events.

### Work with Spyglass. We are trusted Microsoft Partners.

For more than 15 years, we've closely partnered with Microsoft to help our clients' businesses perform better. We are proudly a Microsoft Gold Certified Partner in Application Development, Cloud Platform, Cloud Productivity, and Collaboration and Content.

From end-to-end, our developers can help you extend and customize your Office 365 apps to best serve your business. This includes strategy, data requirements, project planning, and SharePoint integration. Let's see what kind of change you can power with PowerApps. Let's get moving.
