

Copilot for Microsoft 365- Data & Security

A readiness assessment to launch you into success

The Challenge

Copilot for Microsoft 365 is a whole new way to work thanks to the integration of AI into our normal business tasks that allow us to be more productive and bring forth new insights from the documents we interact with. However, there are challenges that come along with these new capabilities including:

- Adoption
- Security
- Compliance
- Maintaining consistent controls and policies

The Solution

Spyglass's Copilot for Microsoft 365 Data and Security Readiness Assessment is focused on the Identity and Data protection components that need to be implemented to prevent unauthorized access and exfiltration of data. Readiness can focus on planning, strategy to implement, and/or the actual implementation of controls and solutions.

- Identity and Access Management (IAM)
 - The Readiness workshop dives into the ins and outs of handling the required IAM controls and processes. These processes will be used to protect, monitor, and control who has access and how they view information presented within Copilot for Microsoft 365.
- Data and Information Protection/Governance
 - The Readiness engagement will work to establish the necessary controls and requirements to protect and govern data and information within Copilot for Microsoft 365 and its sources.

The Details

- 4 weeks*
- * Cost and duration based on scoping.

Deliverables

- Summary and Design Document
- Configuration Document
